

EUROLEAGUE 2026-27

PROJECTED STANDINGS

A home-win classifier (XGBoost anchored on Elo) trained on 1,848 Euroleague games from 2020-21 to 2025-26, fed roster-aware pre-season strength, run over the real 380-game schedule. Olympiacos is the clear favourite; positions four through eleven are separated by less than two expected wins.

PROJECTED STANDINGS

Clubs ordered by expected regular-season wins over 38 games. The range bar spans the middle 80% of simulated outcomes around the expected record; the shaded cells give each club's chance of a direct playoff place (top six), a play-in place (seventh to tenth) and the title-favourite spot. Hover a row for the full breakdown.

#	CLUB	PROJECTED	WIN RANGE (10TH TO 90TH PCT)	PLAYOFFS	PLAY-IN	1ST PLACE	BOTTOM 3
DIRECT TO PLAYOFFS							
1	Olympiacos	26.1 - 11.9 21 to 31 wins		83%	12%	35%	0%
2	Real Madrid	22.5 - 15.5 17 to 28 wins		55%	23%	10%	2%
3	Crvena Zvezda	21.8 - 16.2 16 to 27 wins		49%	23%	8%	3%
4	Dubai	21.7 - 16.3 16 to 27 wins		46%	25%	7%	3%
5	Panathinaikos	21.0 - 17.0 15 to 27 wins		42%	25%	5%	4%

#	CLUB	PROJECTED	WIN RANGE (10TH TO 90TH PCT)	PLAYOFFS	PLAY-IN	1ST PLACE	BOTTOM 3
6	Fenerbahçe	20.8 - 17.2 15 to 27 wins		40%	25%	6%	6%

● Expected wins 10th to 90th percentile 19 wins = .500							

WHERE EACH CLUB FINISHES

Probability of each final position, from the same 10,000 seasons. Darker cells are more likely; numbers are percentages. The wide, flat rows in the middle are the honest picture: most of the league is a coin flip between playoffs and play-in.

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

ASVEL														3	4	5	8	11	18	44

WHAT THE ROSTERS CHANGED

Each club's pre-season strength is a regression of last season's carried net rating, the prior-season production of the registered roster (PIR per 40 and net RAPM of the top nine, unknown arrivals at replacement level) and continuity, the share of last season's minutes still on the roster. Values in net rating points per 100 possessions.

CLUB	REGISTERED	WITH RAPM	CONTINUITY	CARRIED NET (2025-26)	ROSTER PIR/40 VS LEAGUE	ROSTER RAPM (TOP 9)	PRE-SEASON PRIOR
Olympiacos	16	14	75%	+10.8	+6.0	+0.5	+7.9
Real Madrid	16	13	74%	+7.1	+0.7	+0.3	+3.0
Dubai	18	18	92%	+0.1	+2.3	+0.8	+2.3
Panathinaikos	16	13	65%	+3.0	+1.9	+0.6	+2.1
Crvena Zvezda	16	12	60%	+1.1	+2.8	+0.0	+1.8
Hapoel TA	18	15	67%	+2.6	+1.2	+0.5	+1.5
Fenerbahçe	15	14	41%	+2.3	+2.3	-0.3	+1.1
Valencia	15	13	42%	+4.8	+0.3	-0.5	+0.6
Zalgiris	15	14	62%	+5.4	-1.4	-0.6	+0.3
Barcelona	15	11	30%	+0.9	+2.0	-1.1	-0.1
Maccabi	15	12	69%	-3.6	+2.2	-1.1	-0.2
Milan	15	14	38%	-0.8	+1.0	-0.0	-0.9
Paris	14	11	69%	-1.2	-0.8	-0.3	-1.2
Beşiktaş	14	11	52%	+0.8	-1.9	-1.1	-2.1
Bayern	19	12	56%	-3.9	-0.8	-0.8	-2.7
Efes	15	12	45%	-5.9	+0.1	-1.3	-3.3

CLUB	REGISTERED	WITH RAPM	CONTINUITY	CARRIED NET (2025-26)	ROSTER PIR/40 VS LEAGUE	ROSTER RAPM (TOP 9)	PRE-SEASON PRIOR
Baskonia	15	11	40%	-6.1	-1.5	-1.3	-4.7
Virtus	14	10	31%	-5.9	-1.9	-1.1	-5.1
Partizan	15	13	24%	-6.2	-1.9	+0.0	-5.2
ASVEL	15	8	20%	-11.1	-6.6	-1.8	-10.7

FITTED PRIOR

0.35 × carry

Only about a third of last season's net rating survives into the next; the rest is turnover and regression to the mean. Plus 0.68 per PIR/40 point of roster value and 3.5 points for a fully returning roster.

BIGGEST ROSTER HITS

Partizan, Valencia, Fenerbahçe

Partizan keeps 24% of last season's minutes and its roster values lowest in the league; Valencia lost Montero, Pradilla, Thompson, Badio and Costello and drops from +4.8 carried to +0.6; Fenerbahçe returns 41% of minutes.

BIGGEST ROSTER LIFTS

Dubai, Crvena Zvezda

Dubai returns 92% of a roster that finished near .500 and adds proven Euroleague production; Zvezda's registered nine value 2.9 PIR/40 above league average despite 60% continuity.

RAPM: PULLED, MATCHED, AND MOSTLY REDUNDANT

Hackstatat's regularised adjusted plus-minus was collected for every Euroleague and EuroCup player-season since 2020-21 (plus ACB, LBA and BCL for the last two seasons) and matched to league player codes for 98% of Euroleague rows. Tested as a roster valuation next to PIR, it did not improve the season-strength forecast.

SEASON-STRENGTH MODEL	LEAVE-ONE-SEASON-OUT RMSE
carry only	4.72
carry + PIR + continuity	4.47
carry + RAPM(top9) + continuity	4.64
carry + RAPM(all) + continuity	4.64
carry + PIR + RAPM + continuity	4.47
RAPM + continuity (no carry)	5.16
naive (league mean)	5.44

CROSS-LEAGUE SHIFT

-1.6 / -2.1 / -1.1

Mean change in net RAPM for players moving to the Euroleague from EuroCup, ACB and LBA respectively, estimated from players who made each move with at least 1,000 possessions on both sides.

WHY IT ADDS NOTHING

Already in the carry term

RAPM is regularised toward zero and defined relative to a team's own results, so a roster's summed RAPM largely restates last season's net rating, which the model already has. PIR captures individual production independently of team context and travels better with a player who changes clubs.

BEST NET RAPM LAST SEASON

Euroleague 2025-26, at least 1,000 team possessions, with where each player is registered for 2026-27.

PLAYER		2025-26	2026-27	OFF	DEF	NET
Jones C.	Partizan	Partizan		+1.6	+5.4	+7.0
Melli N.	Fenerbahçe	Fenerbahçe		+0.7	+6.2	+6.9
Jessup J.	Bayern	Bayern		+0.8	+5.4	+6.2
Morgan J.	Paris	Paris		+2.6	+3.6	+6.2
Francisco S.	Zalgiris	Panathinaikos		+2.9	+3.3	+6.1
Walkup T.	Olympiacos	Dubai		+1.8	+4.2	+6.0
Dibartolomeo J.	Maccabi	Maccabi		+2.5	+3.3	+5.8
Satoransky T.	Barcelona	Hapoel TA		+1.1	+4.6	+5.7
De Colo N.	ASVEL Villeurbanne, Fenerbahçe SK	not registered		+2.1	+3.5	+5.6
Shengelia T.	Barcelona	Dubai		+3.2	+2.2	+5.4
Mirotic N.	AS Monaco Basket	not registered		+3.0	+2.4	+5.4
Thompson D.	Valencia	Milan		+1.7	+3.6	+5.3
Ward T.	Olympiacos	Olympiacos		+2.6	+2.4	+5.1
Bryant E.	Hapoel TA	Hapoel TA		+2.5	+2.6	+5.1

HOW MUCH TO TRUST IT

Rolling-origin validation: the model is trained on all seasons before the test season and scored on that season's games. Log loss, lower is better; 0.693 is a coin flip.

TEST SEASON	GAMES	MODEL	ELO ONLY	HOME RATE	AUC	ACCURACY
2022-2023	294	0.630	0.627	0.657	0.63	63%
2023-2024	297	0.591	0.593	0.648	0.69	71%
2024-2025	296	0.619	0.628	0.660	0.66	64%
2025-2026	402	0.622	0.611	0.655	0.65	66%
Weighted mean	1,289	0.616	0.614	0.655		

Read the numbers this way. The classifier beats the home-court base rate clearly and matches a single-feature Elo model; the extra features buy calibration and roster awareness rather than raw accuracy. With under two thousand games that is the realistic ceiling.

- Strength is static across a simulated season and sampled once per iteration with a 4.5-point spread (the season-prior residual), wider for Beşiktaş's transfer-based prior.
- Beşiktaş's history is EuroCup, transformed to Euroleague scale with ratios from eight previous promotions; promoted clubs have historically landed near net zero regardless of EuroCup dominance.
- NBA and domestic-only arrivals carry no production history and count at replacement level, so clubs that recruited from there (ASVEL, Valencia's Gueye) are priced conservatively.
- Tiebreaks use head-to-head record among tied clubs, then random; point differential is not simulated.
